TODO
1. Entry and editing validation on the UI after editing.
2. Add Tabs and handle multiple files.
    a. Possibly remove the StartPage
3. Update ReadMe with the documentation.
    a. Add screenshots of the application
    b. Give a comprehensive description of how the user will run the program
4. Fix bugs and testing with file saving.
5. Formatting six digit output and conversion from integers with the appropriate sign
6. Fix store function to properly store the values from the accumulator into the 6 digit format.
7. Add memory locations up to 250
8. Add Use Cases for this milestone.
9. Unit tests

Katie
5-7 (4-6 conversion and 250 memory locations)

Margo
1 (validation)

NIck:
2 (tabs and multiple files)
3 (Update ReadMe) - if possible add a tutorial video on the UVsimulator application
4 (Fix bugs and test file saving)

Jarrett:
- 8
- Unit tests

Message to Professor Burtt about changing our grades on milestone #4.
